NEC POWER BI DASHBOARD 

ENVIRONMENTAL PARAMETERS OF GWALIOR

PRESENTED BY:
SHREYA GOYAL

SUBMITTED TO:
Dr. HIMANSHU SINGH
ASSISTANT PROFESSOR
DEPARTMENT OF ELECTRONICS
ENGINEERING

INTRODUCTION

- Gwalior, a city in Madhya Pradesh, is experiencing increasing environmental challenges due to climatic shifts.
- It is important to track parameters like temperature, rainfall, humidity, and air quality to understand the environment better.
- By studying data from previous years, helps in identifying pollution patterns, and climate anomalies
- This Power BI dashboard project aims to visualize and interpret Gwalior's environmental data in an interactive and insightful manner.
- It also helps spread awareness among people so they can take steps to protect the environment.

KEY INSIGHTS

- Total rainfall and humidity levels were highest during the monsoon months (July to September).
- Summers have been getting hotter over the years.
- The Air Quality Index (AQI) rose during the dry summer and winter months, reflecting more pollution during these seasons.
- May and November recorded the highest number of high pollution days, possibly due to festivals.
- During the COVID-19 lockdown period (2020–2021), both AQI and pollution levels showed a significant drop, likely due to reduced human and industrial activity.

THANK YOU
